

# Heat Plus Treatment for Drywood Termites

*There is no easy way to do a good quality heat job. Even though it seems easy to exterminate drywood termites with heat -- you just need to reach 120 ° F and keep it for only little over 30 minutes -- however in practice there are many obstacles to that.*

*As a very experienced company with huge investment on equipment and having extremely trained and experienced workforce we can do it properly. Also, we combine heat with natural borate foaming to achieve preventative effect and double-treat drywood termites to ensure much better quality of work.*

*This is a premium quality of work done by only natural and no chemical methods approved by the state as a complete and proper drywood termite treatment!*

**Prime Termite**
